AGILE APPLICATION DEVELOPMENT

Limitations in traditional waterfall-type software development methodologies have many organizations turning to, or experimenting with, Agile Methodology for application development. Based on experiences gathered from over hundreds of agile projects, we have developed and refined a repeatable way to enable the efficient and successful delivery of enterprise-scale projects using Agile Methodology.

CUSTOM SOLUTIONS

It's no longer enough to migrate business functions to the internet. To be competitive, organizations must constantly evolve with emerging technologies and stay one step ahead of consumer usage trends. Online technology goals are moving targets. That's why you need a partner that's as nimble as the technology itself.

IV &V SERVICES

GS Tech offers Independent Verification and Validation (IV&V) services so you can obtain this crucial information in an environment organizationally free from the influence, guidance and control of the development effort.

EBUSINESS SOLUTIONS

To be successful, business process reengineering projects (BPR) need to be top down, taking in the complete organization, and the full end to end processes. It needs to be supported by tools that make processes easy to track and analyze.
